Annual Savings

60

Minutes Process Time Per Register

THE STORY IN BRIEF

This Singapore supermarket chain has operated for more than a century and is a well-known name in the local grocery market.

As part of its focus on improving store efficiency, the business identified cash handling as an area where a faster, more structured process could make a meaningful difference.

With cash still important in daily operations, the goal was to reduce repetitive counting tasks and better support store teams.

Manual Counts

Cash handling across the estate was still highly manual. Teams were preparing start banks, completing till lifts, and counting registers several times each day.

Supervisor Recounts

Cashiers spent significant time preparing and reconciling registers, while supervisors then had to verify the figures.

Paper Records

Discrepancies added further pressure, with double counts, reporting errors, and paper records creating extra steps.

The business needed a solution that could reduce counting time, cut manual input, and make the process easier to manage across stores..

THE CHALLENGE

THE SOLUTION

A new cash handling process was introduced in collaboration with the management team.

Cashmaster One Max with integrated Cashmaster Printer One was selected to help stores count more efficiently, while printing and storing start bank count details.

Integrated report printing removed the need for manual paper records and gave stores a clearer process to follow.

Training was delivered through store workshops, helping teams adopt the new process quickly and confidently.

THE OUTCOME

The project delivered clear operational gains. Counting times were significantly reduced for cashiers, and supervisors no longer needed to carry out recounts.

The solution also reduced time spent manually recording and entering data, freeing supervisors to focus on other areas of the store.

Annual cost savings are expected to exceed S\$1.5 million across the business.

The result was a simpler, more controlled process with less manual work and more time for teams to support daily store operations.

Time Saved

Fewer Recounts

Lower Manual Input

“Cashmaster’s consultative approach really added value to the project. The Cashmaster One Max devices surpassed all of our customers goals, including significant reductions in the time spent manually recording and entering data, freeing up time for our supervisors to add value in other areas of the store.”
